not 100% sure but I believe doing an upgrade on the election database deletes all stored procedures and then only puts in the new wineds procedures -- it has no idea about parish manager procedures so they are missing when the upgrade is complete. can't do either export since the export stored procedure does not exist. i will be doing my upgrade in the morning and confirm that this is in fact why it does not work.

Craig.

It is definitely the upgrade messing with the export function.

I tried it on a laptop what was not upgraded, (and it worked) then upgraded the server and it stopped working.
